

A. CLASSIFICATION OF SUBJECT MATTER
IPC 7 C12N15/82 C12N9/22

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 7 C12N

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, BIOSIS, Sequence Search, EMBL

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 03/054189 A (SUNGENE GMBH & CO. KGAA; BIESGEN, CHRISTIAN) 3 July 2003 (2003-07-03) the whole document page 18 -----	1-23
Y	TZFIRA TZVI ET AL: "Site-specific integration of Agrobacterium tumefaciens T-DNA via double-stranded intermediates." PLANT PHYSIOLOGY (ROCKVILLE), vol. 133, no. 3, November 2003 (2003-11), pages 1011-1023, XP002319962 ISSN: 0032-0889 the whole document -----	27-31
Y	-/-	1-23

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *&* document member of the same patent family

Date of the actual completion of the international search

INTERNATIONAL SEARCH REPORTInternational application No.
PCT/EP2004/013122**Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)**

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:

2. Claims Nos.: 24-26 because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210

3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

The additional search fees were accompanied by the applicant's protest.
 No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box II.2

Claims Nos.: 24-26

Present claims 24 to 26 relate to a nucleic acid defined inter alia by the sequence of the encoded protein and by reference to the parameter of the GC content of about 50% to about 60%.

In addition, said claims use provisos, i. e. negative features, to define their subject matter. In the case of claim 25, 100 provisos are recited, which make it unduly burdensome to determine the scope of protection sought. The large amount of provisions and conditions in said claims results in a lack of conciseness within the meaning of Article 6 PCT.

The use of the above-mentioned parameter and the use of predominantly negative features in the present context, which make it difficult to determine the boundaries of the claimed invention, is considered to lead to a lack of clarity within the meaning of Article 6 PCT. It is impossible to compare the parameters and the multitude of provisos the applicant has chosen to employ with what is set out in the prior art. The lack of clarity is such as to render a meaningful search impossible.

Consequently, no search report has been established for the subject matter of present claims 24 to 26.

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-23

a method for introducing a foreign DNA of interest into a preselected site of a genome of a plant cell comprising the steps of
(a) inducing a double stranded DNA break at the preselected site in the genome of the cell ;
(b) introducing the foreign DNA of interest into the plant cell;
characterized in that the foreign DNA is delivered by direct DNA transfer

2. claims: 24-31

an isolated DNA fragment comprising a nucleotide sequence encoding the amino acid sequence of SEQ ID No 1 (I-SceI), wherein the nucleotide sequence has a GC content of about 50% to about 60%, and which meets the provisos recited in claim 24
